

WHY YOUR API FEELS SLOW (EVEN IF IT'S FAST)

API response is fast

But your app still feels slow...

In this post:

- Where the real delay happens
- Why frontend causes it
- How to fix it

THE DELAY IS NOT IN YOUR API

API returns in 200ms

But UI takes seconds...

Why?

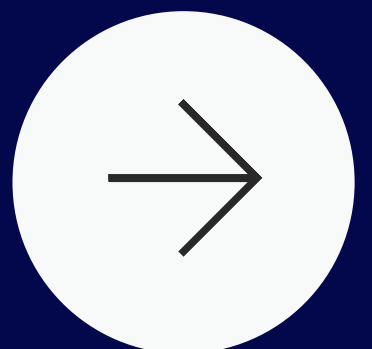

- Sequential requests (waterfall)
- Heavy rendering
- Blocking JavaScript

Example:

```
await fetchUser();  
await fetchPosts();
```

Slow (one by one)

```
await Promise.all([...]);  
Faster (parallel)
```

FAST API $\neq$ FAST APP + WEB

Check using Chrome DevTools
(Network tab)

Look for:

- Waterfall delays
- JS blocking
- Render time

Fix it:

- Parallel requests
- Code splitting
- Optimize rendering
